

Added value

Our business concept

Ranpak strongly believes that the business concept, the magic triangle of End user – Ranpak - Distributor, is a critical factor in our success. The power that Ranpak and its distributors create together, optimizes the local service as well as the added value they can offer to the End users.

Integrated applications

Ranpak can increase your output by integrating our converters into your packaging lines. Our System Engineers can even design a custom converter to fit your unique situation and application for the most efficient, safe and user-friendly operation.

Packaging Engineering

Ranpak's Packaging Engineers are experts in the design, analysis and testing of packages to ensure that they arrive in the same condition as they left. Send your packaging challenge to Ranpak and one of our Packaging Engineers will design a package solution that ensures that your

product arrives at your customer economically and damage-free. They take into account the product size, weight, fragility and shipping methods in designing the optimum package and shipping solution.

Ranpak's Packaging Engineers analyze your current packaging costs and benchmark this against its own packaging recommendations. To make a good comparison of the overall cost savings, they include the estimated cost of the box, interior packaging materials and labor costs.

Ranpak in-the-box packaging solutions - the natural choice

Ranpak is a global manufacturer of paper packaging materials and systems that protect your products during shipment. No matter what you are shipping, you simply will not find a packaging material that is more versatile than Ranpak's PadPak® and FillPak® products. At Ranpak we are conscious of our responsibility to the environment and we strive to produce the most environmentally friendly in-the-box packaging. Ranpak kraft paper is made from unbleached paper, produced by suppliers that are FSC certified.

Our history

Ranpak Corp. was founded in 1972 and created the first environmentally responsible packaging material to effectively cushion and protect products during shipment. Ranpak Corp. is headquartered in Concord Township, Ohio (a suburb of Cleveland) and covers the North & Latin American markets. Ranpak BV, founded in 1991, is located in Heerlen, the Netherlands, is responsible for the European and Asia-Pacific markets.

Our name

Our name - Ranpak - which stands for random packaging, brings with it superior yet simple solutions for in-the-box packaging applications.

Ranpak is one of the world's largest producers of paper packaging materials and systems. The constant development and improvement of our materials, systems and total solution concepts, have earned us a reputation as an innovative leader in the packaging industry.

The environment

Ranpak has always focused on paper solutions and we feel a strong sense of responsibility to protect our environment. The environmental friendliness of packaging, depends on many factors, like the presence of hazardous substances, the energy that is needed to extract, process and dispose the materials and the emission of gasses that are released during this process.

Taking all these factors in consideration, Ranpak's choice of a kraft paper system is an easy one. The paper is made from a natural renewable source, unbleached, biodegradable, decomposable and recyclable.

But fundamentally, Ranpak has always focused on paper, because we strongly believe that it is a superb and highly flexible packaging material that can be used in many ways. When used in the right way, paper has remarkable cushioning characteristics and is able to protect a great variety of products. In addition to cushioning, paper is a good alternative for voidfilling, both from a handling, as from an environmental point of view.

Ranpak paper

All Ranpak paper is produced from sustainable forestry sources and is 100% biodegradable and recyclable offering a better environmentally friendly alternative to other in-the-box packaging methods such as polystyrene chips, air bags and bubble wrap. Ranpak paper is an extremely durable multi-ply or single-ply kraft paper and is available in 50, 70 or 90 grams, fan folded or in rolls, maintaining its shape in the box, even after being kept in storage for several months. Specialty papers: coloured, all-ply white and outer-ply white papers are all available on request, subject to volumes.

Ranpak protective packaging systems

Using single and multi-ply paper, Ranpak systems are ideal for producing packaging material for the four key in-the-box packaging applications: cushioning, wrapping, blocking & bracing and voidfill.

PadPak® in-the-box cushioning system

PadPak is a highly versatile paper packaging system, ideal for cushioning, wrapping and blocking & bracing, even the most valuable and fragile products - from computer monitors,

radiators and replacement automotive parts through to fine china, paintings, circuit boards and surgery kits.

Dependent on the strength of packaging required, 1, 2 or 3-ply untreated kraft paper is separated allowing air to be trapped between the layers. Inside the patented converting machine, the paper layers are crimped together to form a protective cushioning pad, which can then be used to safely package the product.

Pads for heavy cushioning can be formed using the PadPak Junior® and PadPak Senior® machines, whilst the PadPak LC™ provides an ideal high-speed solution for cushioning.

From the heaviest to the most fragile product, there simply is not a more versatile packing material than PadPak, the natural choice.

FillPak® in-the-box voidfilling system

FillPak offers unlimited possibilities as part of your packaging environment, in full automatic-, automatic- or manual mode and even as a mobile, ad-hoc working station on location with no limits.

FillPak offers cost reduction by optimizing the quantity of material used to fill the void in your package, without burdening your customers with an unmanageable and environmental unfriendly amount of packaging material. Equipped with an ingenious paper feed system and a sophisticated design, the operating space required is minimal and can be integrated into your packaging line any way you want.

Applications

Ranpak systems are highly flexible and operate successfully across a wide range of industries including: Electronics, Automotive, Technical instruments, Pharmaceuticals, Catalogue and E-commerce, Logistics, Household appliances, Machinery.

Protection is in our nature
